Dear Dr Patel

Re: Mrs Margaret Ashworth, DOB 14/03/1969, NHS No 999 447 1015, 27 Larch Close, Northam, NM4 7QT

Advice and Guidance response

Thank you for your Advice and Guidance request regarding this 55 year old lady with a microcytic anaemia (Hb 112 g/L, MCV 77 fL) and ferritin of 9 ug/L in February.

Iron deficiency anaemia in a post-menopausal woman should be regarded as gastrointestinal in origin until proven otherwise. I would recommend a FIT test and referral on the suspected lower GI cancer pathway if positive, or upper and lower GI investigation in any case. Coeliac serology would also be reasonable.

Oral iron replacement is appropriate in the meantime but should not delay investigation.

Actions for GP:

- Arrange FIT and coeliac serology
- Refer for GI investigation

Yours sincerely

Dr J Whitfield
Consultant Haematologist
